Realeak

For fashion brands losing money on products nobody wants, Realeak is an AI agent that reads Vinted every day and flags what's resold brand new, so the next reorder is right.

ATTENTION · The problem

Brands track returns. They don't see the products customers keep but don't want: those end up on Vinted, brand new.

55.5%

of the **1,101** Cabaïa items for sale on Vinted are brand new (never used) · **28.7%** still have their tags

real data, 22 Oct 2026

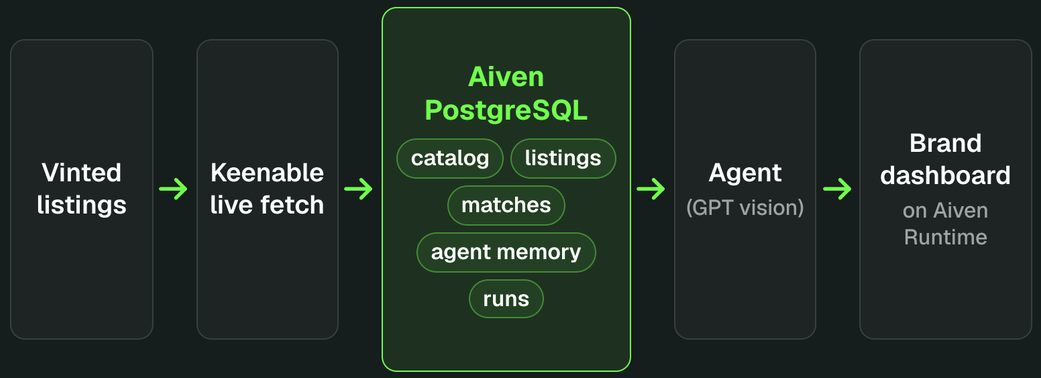

WHY NOW

- **EU ban on destroying unsold clothing and footwear** (ESPR, July 2026): brands must make what people actually keep
- **Second-hand is mainstream:** every unwanted product becomes a public listing
- **Vision AI now reads a listing for about $0.001:** watching every listing daily is affordable

INTEREST · The agent

1. **Reads Vinted live** via Keenable, decides which pages and countries, stops when nothing new
2. **Recognizes the product** from the photo among **2,038** catalog items, escalates when unsure, says 'unknown' rather than guess
3. **Learns:** nicknames, confirmed photos and team corrections go to memory
4. **Writes recommendations** for the product team

DATA LAYER

Every listing keeps `first_seen` / `last_seen`:
new unwanted listings per product, per day.

DESIRE · Evidence (before / after)

Question: share of Cabaïa resold brand new?	Answer	Basis
No-data baseline (GPT-6.1, no data)	≈30% (guess, range 20–45%)	low confidence
Realeak (agent + data)	**55.5% new** (611 / 1,101)	measured today

Naive keyword workflow vs agent	Keywords (no AI)	Agent
Listings classified by family	89%	100%
Exact product, photo-verified	no (text only)	yes, or 'unknown'
Exact products named	145 text guesses (match the photo 6/28)	47 photo-verified

Agent run: 315 listings identified in 8.7 min for $0.29 · OpenAI + Keenable APIs

ACTION

First users

First users: product teams of mid-size fashion brands with a strong Vinted footprint (bags, accessories, kids).
Free resale audit for 10 pilot brands → **paid monthly Realeak** per brand. Live app on Aiven Runtime.
